

Butt Cart

I built this cart for a friend to make it easier to lovingly manage the Earth.

The two 8" pneumatic tires on the rear can carry hundreds of pounds of people or cargo. These are spaced two feet apart so they can cruise between the rows. The low deck makes it convenient work the ground.

A slightly smaller third wheel is mounted on a swivel, to enable mobility.

This garden low-rider doesn't move very fast, but it hauls ass.
