

Cool Air From Ice Chest

When our air conditioner went out, the sun persisted in roasting the surrounding countryside with three-digit weather. We really weren't asking for much – just a little mercy right where we were sitting.

So I cut a 1” thick piece of Styrofoam to fit snugly into the top of an ice chest, cut holes in it to accommodate a sheet-metal Ell and a computer muffin fan. Just add ice, and we could at least stay cool while we were staying still.
